Mustang Series

M113-21 or M6113-21 (Globe)

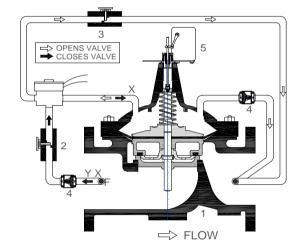

Basic Valve Features

- Single Piece Flat Diaphragm Designed
 Absolute no friction to the rubber diaphragm against the basic valve
- Only Three Major Components Cover, Stem Assembly and Body
- 100% Fusion Bonded Epoxy Coated NSF 61 Certified Epoxy Coating Internally and Externally
- Simplified Maintenance
 No special tools and skill are required

Function

- Opens and closes at a controlled rate on pump start-up and shut-off. (Adjustable)
- Hydraulic check features close valve to ensures safety of pump on flow reversal.

Schematic

Components

- Main Valve
 Needle Valve
- Limits Switch
 Check Valve

- F Flo-Clean Strainer
 X Isolation Cocks
- Y Strainer
- P/L Position Indicator / Limit Switch

Operation

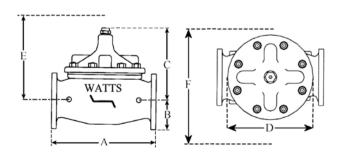

The WATTS ACV M113-21 Booster Pump Control valve is designed to minimize the surges associated with the starting and stopping of pumps.

Pump Start Up: When the pump is signaled to start, the 3-Way Solenoid is energized and allows the basic valve cover chamber to be vented downstream, causing the valve to open slowly at a controlled rate by the adjustable opening speed control, gradually admitting pumping pressure into the distribution system.

Pump Shut down: When the pump is signaled to turn off, the 3-Way Solenoid valve is de-energized by electrically interlocked, allows the basic valve cover chamber to be connected to upstream pressure, causing the valve begins to close slowly at controlled rate by the adjustable closing speed control while the pump continues to operate. When the valve reaches the closed position, the limit switch is actuated, turning the pump off.

M113-21 is Full Port designed Booster Pump Control Valve with M100 Basic Valve and M6113-21 are Reduced Port designed Booster Pump Control Valve with M6100 Basic Valve.

Main Valve Material Specifications

Body and Cover

- Ductile Iron ASTM A-536

Coating

- NSF 61 Certified Fusion Bonded Epoxy

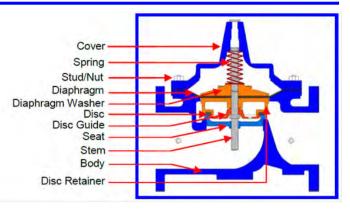

Stem, Seat and Disc Guide - Stainless Steel ASTM 316 Nut and Spring

- Stainless Steel AISI 304

Disc Retainer - Ductile Iron "Epoxy Coated" - Ductile Iron "Epoxy Coated" Diaphragm Washer Studs and Nuts - Steel with Chrome Plated

- Nvlon Reinforced Buna-N ASTM D 2000 Diaphragm

- Buna-N Rubber ASTM D 2000 Disc

Main Valve Technical Data

Valve Size - 25 mm to 600 mm **Designed Standard** - AWWA C530-12

- Class 150 Max. 250 PSI (Standard) Operating Pressure

- Class 300 Max. 500 PSI (Optional)

Operating Temperature - -10 to 90 deg. C (Fluids)

End Connection - 50 mm to 600 mm Flanged End

- 25 mm to 40 mm Screwed End

- ANSI Class 150, Class 300, BS 4504 Flange Standard

PN 16 or PN 25

Pilot System Specifications

- 3/2 Way Type

- Brass ASTM B283 **Body Material**

- Buna-N Synthetic Rubber Disc - NEMA Type 1,2,3,3S,4,4X Enclosure

Pressure Rating - 200 PSI

Power Supply - 220 VAC 50 Hz, 24 VDC

Limit Switch Model - Figure 51-1

Electrical Contacts - SPDT 15 amp 125 or 250 VAC Fittings and Tubing - Brass and Copper (Standard)

Stainless Steel (Optional)

Installation Guidelines

- Prior to installation, flush line to remove debris.
- Install valve horizontally "in line" (cover facing up), so flow arrow matches flow through the line. Avoid installing valves size 150 mm and larger vertically. Consult factory prior to ordering if installation is other than described.
- Install inlet and outlet isolation valves. Notes: When using butterfly valves, insure disc does not contact control valve. Damage or improper valve seating may occur.
- By-pass isolation valve is recommended to installed for maintenance purpose without shutting down the systems.
- Provide adequate clearance for valve servicing and maintenance (refer to Dimension Table).
- It is advisable to install a strainer before the control valve to prevent any solid particle from entering the valve body.
- Install pressure gauge to monitor valve inlet pressure.
- Connect Solenoid Pilot to appropriate power source in compliance with local electrical codes.

Flow Data Series M 100 / M 6100 (Globe)

Valve Size (mm)		25	32	40	50	65	80	100	150	200	250	300	350	400	450	500	600
Max. Continuous	M100	83	95	130	208	300	460	800	1850	3100	4900	7000	8500	11000

Max. Intermittent	M100	86	119	161	260	380	580	990	2300	3900	6100	8800	11500	11400			
Flow Rate GPM	M6100						325	720	1280	2750	5100	8000		11500	17950	20625	21560
CV Factor	M100	20	25	30	54	85	115	200	490	770	1245	1750	2300	2940			
USGPM	M6100						62	136	229	480	930	1458		2110	3300	3400	3500

Maximum continuous flow based on pipeline velocity of 20 ft. per second.

Maximum intermittent flow based on pipeline velocity of 25 ft. per second.

The Cv factor of a valve is the flow rate in US GPM at 60° F that will cause a 1 PSI drop in pressure.

The factors stated are based upon a fully open valve.
